ArcSys Hot Tip

This is the beginning of our 18th year in business and publishing a newsletter. Imagine, 204 publications! Not too bad for a small software business. Send us an email of what you recall as the "best" newsletter article published in ArcBITS. Send to marchule@earthlink.net

A Primer in Sorting

Even though the concept of sorting should be simple and straight forward, it is often easy for people to get a little puzzled. As we all know, the English alphabet is made of 26 letters, A-Z. The computers we work with use a coding system known as ASCII and it contains an alphabet of 256 symbols. Included in this set of symbols are the letters A-Z, a-z, numbers 0-9 and a number of other special characters like # \$ % & * () to name but a few. If we put the first 128 symbols in order of their definition, they become:

		Regu	ılar AS(II Chart	(characte	er codes	0 - 127)	1	
000	(nul)	016 🕨	(dle)	032 sp	048 0	064 0	080 P	096 `	112 p
001 @	(soh)	017 ◀	(dc1)	033 !	049 1	065 A	081 Q	097 a	113 q
002 \varTheta	(stx)	018 ‡	(dc2)	034 "	050 2	066 B	082 R	098 b	114 r
003 🔻	(etx)	019 !!	(dc3)	035 #	051 3	067 C	083 ន	099 с	115 ៩
004 +	(eot)	020 ¶	(dc4)	036 \$	052 4	068 D	084 T	100 d	116 t
005 🕭	(enq)	021 §	(nak)	037 %	053 5	069 E	085 U	101 e	117 u
006 🛧	(ack)	022 -	(syn)	038 હ	054 6	070 F	086 V	102 f	118 v
007 •	(bel)	023 ‡	(etb)	039 '	055 7	071 G	087 ឃ	103 g	119 ឃ
008 🗖	(bs)	024 †	(can)	040 (056 8	072 H	088 X	104 h	120 x
009	(tab)	025	(em)	041)	057 9	073 I	089 Y	105 i	121 y
010	(1f)	026	(eof)	042 *	058 :	074 J	090 Z	106 j	122 z
011 ♂	(vt)	027 ←	(esc)	043 +	059 ;	075 K	091 [107 k	123 {
012 +	(np)	028 L	(fs)	044 ,	060 <	076 L	092 \	108 1	124
013	(cr)	029 ↔	(gs)	045 -	061 =	077 M	093]	109 m	125 }
014 Þ	(30)	030 🛦	(rs)	046 .	062 >	078 N	094 ^	110 n	126 ~
015 🗘	(si)	031 ▼	(us)	047 /	063 ?	079 0	095 _	111 o	127 o

This is important to know because you can see that the numbers come before the letters. Upper case letters come before lower case letters. This order is what controls how the computer "thinks" when it is told to sort a column of data. The following list is sorted correctly (as far as the computer is concerned) because it is just looking at the rank of each character. As people we tend to see the following list as words with context.

ADAM BAKER ad bake

What makes computers so helpful is how fast they can sort and organize data. Computers don't sort "words" but character by character comparisons. If you were given a deck of cards and told to place in suit and then rank order, how many times would you have touched each card? If the deck were already sorted, you would touch each card a minimum of 52 times. But if the deck is truly random, you can see that each card could be handled many times. (You should try this sometime.) A clever mechanism for sorting a large number of data is to perform what is known as "divide and conquer". If you broke your deck of cards into 4 smaller piles, you will find it easier to sort each small pile. Then when each sub-pile is organized, you merge the 4 piles together. In the long run, you end up handling all the cards fewer times. These mechanisms for sorting are an example of a computer algorithm. Computer science comes into play in knowing what the optimum methods are for sorting. Ready for a test? See how long it takes you to sort the following:
